# Microsoft Technology Expertise

## Power Apps (Canvas Applications)

I have designed, developed, and deployed over 12 Power Apps across various client environments. These applications range from structured internal forms to complex business process systems supporting operational workflows.

### Capabilities include:

- Custom UI/UX design for usability and adoption
- SharePoint-backed data architecture
- Role-based permissions and security logic
- Integration with Power Automate workflows
- Performance optimization and application governance planning

My focus is on building scalable, maintainable solutions that align with long-term digital strategy.

## Power Automate (Process Automation)

I have implemented multiple automation workflows to improve approval processes and eliminate manual administrative tasks.

### Experience includes:

- Multi-stage approval flows
- Conditional logic and branching workflows
- Automated notifications and reminders
- Data synchronization between systems
- Error handling and flow optimization

One notable implementation improved a large enterprise client's approval cycle efficiency by significantly reducing manual intervention and processing delays.

## SharePoint Online (Architecture & Digital Workspaces)

I heavily leverage SharePoint as a structured back-end for Power Platform solutions.

### Expertise includes:

- SharePoint list architecture design
- Data modeling for application logic
- Permission structuring and governance alignment
- Communication Site design and implementation
- SPFx web parts

I have also designed and built multiple SharePoint Communication Sites to enhance collaboration and internal communication environments.

## Copilot Studio & Microsoft Copilot

I have upskilled in Microsoft Copilot Studio, designing and developing conversational agents ranging from structured FAQ-style bots to more complex, scenario-driven automation agents.

### Experience includes:

- Designing conversational flows for structured and multi-step interactions
- Implementing conditional logic and branching scenarios
- Integrating agents with Power Platform workflows
- Building context-aware interactions to support business processes
- Testing, refining, and optimizing conversational logic

These agents were developed to support internal productivity, automate responses, and enhance digital interaction within business environments.

## Microsoft 365 Ecosystem

- Microsoft 365 administration exposure
- Microsoft Entra ID integration awareness
- Cross-platform solution alignment within the Microsoft ecosystem
- Governance-conscious development practices

## Solution Design & Architecture

Beyond development, I lead solution design discussions for complex projects.

### This includes:

- Facilitating stakeholder workshops
- Translating business requirements into technical architectures
- Designing scalable system structures
- Creating structured UI screens and sites for multiple projects.
- Aligning solutions with enterprise governance standards

My approach ensures technical delivery supports both immediate business needs and long-term sustainability.
