Microsoft Power Platform, SharePoint, and AI Solutions Developer with experience delivering 12+ enterprise-grade applications across multiple client environments.

Specialized in leading solution design discussions, architecting SharePoint-backed systems, implementing automation workflows, and developing intelligent agents using Microsoft Copilot Studio.

Focused on building scalable, user-centric digital solutions that combine structured engineering with AI-enhanced productivity and modern workplace innovation.

Diploma in IT

Belgium Campus iTvarsity — Jan 2019 - Dec 2023

138 Berg Ave, Heatherdale AH, Akasia, 0182

Core Skills

Software Dev Internship

First Technology Digital — Jan 2023 - Dec 2023

Supported development of Power Platform solutions in agile sprint cycles.

Assisted with requirements gathering, testing, and deployment.

Contributed to documentation and user acceptance processes.

Development & Design Skills

PowerFX | SPFx | React | Wireframing & UI Prototyping | REST APIs

AI & Automation

Microsoft Copilot Studio | Microsoft Copilot | Conversational AI Design | Workflow Automation

Core Strengths

Solution Architecture | Business Process Automation | Requirements Analysis | Stakeholder Engagement | Technical Documentation | Conversational AI Design

Certificates & Badges

Microsoft Certified: Power Platform Fundamentals
Microsoft — July 2024

Microsoft Badge: Introduction to PowerApps
Microsoft — April 2023

Microsoft Badge: Introduction to Power Platform
Microsoft — March 2023

Software Consultant & Developert

First Digital — Jan 2024 - Present

Design and deliver scalable Microsoft Power Platform, SharePoint, and AI-driven solutions for enterprise clients, leading projects from requirements analysis through to deployment.

Impact & Achievements:

- Delivered 12+ Power Apps (Canvas) ranging from structured forms to complex business process solutions.
- Designed and implemented 4 high-impact Power Automate workflows that optimized approval cycles and significantly reduced manual administrative effort for a large enterprise client.
- Developed conversational agents using Microsoft Copilot Studio, ranging from structured support bots to more advanced multi-step scenario-driven agents.
- Leveraged Microsoft Copilot to enhance documentation, solution ideation, and development efficiency within Microsoft 365 environments.
- Architected SharePoint Online back-end structures to support application logic, permissions, and governance.
- Designed and built multiple SharePoint Communication Sites to improve digital collaboration environments.
- Led solution design sessions, translating business requirements into scalable and maintainable technical architectures.
- Collaborated with national development teams to align with enterprise standards and best practices.
- Produced structured technical documentation aligned with enterprise governance standards.
